

1601-545 Folding Arm Bracket Kit

The folding arm bracket is used in applications where the operator access door faces the traffic lane. The bracket allows for the installation of the folding arm kit in these situations.

1. Attach the 1601-540 bracket to the operator through the existing hole (A) and fasten with $\frac{1}{2}$ x 1-1/2 bolt, lock washer and nut supplied. The lock washer and nut are INSIDE the operator cabinet. There is no washer used between the bolt head and the bracket.
2. Using the secured bracket as a guide, drill a $\frac{1}{2}$ inch hole into the cabinet (B).
3. Secure the bracket at B with $\frac{1}{2}$ x 1-1/2 bolt, lock washer and nut supplied. The lock washer and nut are INSIDE the operator cabinet. There is no washer used between the bolt head and the bracket.

Once the bracket is attached, follow the instructions in the folding arm kit.
