DKS offers easy ways to connect fast using DKS connection services. With the easy to use 1830 Access Manager programming software, you can customize the system immediately. Connection and set up is a snap.

**DKS IM Server Modem™**

Give it power, enable cell service, and you’re ready to go.

Plug and Play

Programming from anywhere.

DKS software for easy setup and programming from your computer.

TurnKey Programming

Easy programming from your computer. Use the simple DKS data exchange software for easy setup and programming.

DKS Server Modem™

DKS IM Server Modem™ utilizes the POTS (Plain Old Telephone Service) line at the telephone entry system to provide data (programming) transfer via the internet connection at your subscription-based service.

DKS Cellular operates on the AT&T 4G-LTE cellular network (where available), and as such, a monthly subscription fee applies.

DoorKing does not recommend using a POTS line and modem for data transfer as we can no longer guarantee modem connections. Several DKS IM Server Modem™ connections will not work over cell or VoIP connections. The telephone line at the entry system must support G.711 level service for the IM Server Modem™ to work. You should also be aware that modem phone company services and switches no longer support modem communications since these devices are considered to be obsolete technology.

**ACCESORIES:**

**Cellular Connection**

A wireless solution for connecting managers and users to access control and data via the AT&T 4G-LTE network.

**Internet Connection**

A plug and play solution that provides both voice and data for your existing 1830/90 Series telephone entry systems or to extend access control and data via the internet.

**TCP/IP Adaptation**

Easy plug and play solution that provides both voice and data service in your existing 1830/90 Series telephone entry systems. TCP/IP provides access control and data service or connection service without the need to run additional wiring from each unit to the controller.

**Tracker Expansion Board**

Tracker expansion boards allow the 1830 controller to manage up to 48 entry points. Each 1830 Series Unit allows voice and data via your existing 1830/90 Series telephone entry system.

**Card Readers, Keypads, or Sensors**

Card readers provide a fail safe of DKS, AHID and HID proximity card readers and cards. DoorKing branded keypads provide access control for virtually any applications where access control and communication are desired. Keypads can also monitor and report the status of vehicular access gates from the safety and convenience of a vehicle.

**DKS Relay Control App**

Application for iOS and Android. Available on the Apple App Store and Google Play. Access control can be managed and customized from any iOS or Android device.
