UL 325 – February 2023

Requirements mandated by the safety standard (UL 325) that DKS gate operators are listed to require that photo-beams and contact edges used for entrapment protection must be monitored. Entrapment protection must be provided for the gate system where the risk of entrapment exist. The gate operator will not run without one or more external entrapment protection devices installed in each direction of travel. Check the gate operator installation manual for a list of external entrapment protection devices that can be used with DKS gate operator products.

The August 2018 update to the safety standard requires that a minimum of two (2) independent means of entrapment protection must be provided in each direction of travel where the risk of entrapment exists. The inherent system in DKS gate operators is active in both directions of travel, so this qualifies as one means of entrapment protection in each direction. The second means will be an external device, such as a non-contact (Type B1) or a contact (Type B2) sensor as required in each direction. The actual number of external devices required is dependent on the gate system layout and the number of entrapment areas that will need to be protected. Installers will have to identify all potential areas where the risk of entrapment exist and how best to protect those areas. For example, some gates may require two (or more) external devices in each direction of travel to protect all potential areas of entrapment. The standard also mandates that all components used for monitoring purposes for external devices must be factory installed internally within the device.

There is an exception for swing gates and vertical lift gates regarding the minimum of two entrapment protection devices in each direction of travel. For example, if on a swing gate system there is no potential for entrapment in the opening direction, then only the close direction will require a minimum of two means of entrapment protection. Installers will have to determine if any entrapment hazards exist in the opening direction, and if so, then those areas will have to be protected with external devices.

Vertical lift gates require two means of entrapment protection in the down cycle, but will only require one means of entrapment protection in the up cycle. The model 1175 is considered to be a vertical lift gate operator for entrapment protection means requirements.

Barrier (parking) gate operators that are installed in such a way that the parking arm does not come closer than 16 inches to a rigid object are not required to protect against entrapment.

The table below shows the minimum entrapment protection requirements for each type of gate operator in the scope of the UL 325 Standard for Safety.

	Opening	Closing
Horizontal Slide Gate	2	2
Horizontal Swing Gate	2*	2*
Vertical Pivot Gate	2	2
Vertical Lift Gate	1	2
Horizontal Bifold Gate	2	2
* For a horizontal swing gate operator, at least two independent entrapment protection means are required in each direction of travel. Except, if there is no entrapment zone in one direction of travel, only one means of entrapment protection is required in that direction of travel; however, the other direction must have two independent entrapment protection means.

1. If the operator is mounted less than 8 feet above the ground, the optional powerhead cover (1175-020) is required.
2. II = Commercial; III = Limited Access; IV = Restricted Access.
3. Plug-in loop detector ports; open and reverse. DoorKing plug-in loop detectors only.
4. Operator is equipped with a Type A inherent detection system.

WARNING! LTL Carriers are now charging additional fees for any shipment that is eight (8) feet in length or greater. These fees can be substantial.

1175 Overhead Gate Operator

Indoor/Covered Use Only

Powerhead Assembly - Required

1175-380

Powerhead Cover - Optional

1175-020

Required if powerhead assembly is mounted less than 8 feet (2.43m) above the ground.

Rail Assembly – One (1) Required

1150-225 (8 ft. high gate)

1150-226 (10 ft. high gate)

1150-228 (14 ft. high gate)

Entrapment Protection - Required

Use Type B1 (non-contact) and/or Type B2 (contact) entrapment protection devices to protect all areas where the risk of entrapment exist - see pages 50 - 51.

Operator will not run without entrapment protection device(s) connected to the controller board. See installation manual for more information.

Loops and Loop Detectors - Recommended

See page 52 for a complete list of all loop detectors, prefabricated loops and loop accessories available.

Surge Suppression - Recommended

1879-080 High Voltage (120 VAC)

Backup Power Inverters - Optional

1000-083 1000-Watt, Pure Sine Wave

1000-045 Inverter Post Mount Kit

2160 DC Swing Gate Operator (Coming Soon – not yet available)

Brushless DC Gate Operator

2160

- Input 115/230 VAC
- Adjustable Magnetic Limits
- Three (3) Plug-in Loop Detector Ports
- Plug-in Radio Receiver
- Operator Disable Switch
- Built-in power and reset switches
- Four (4) Programmable Relays
- Data output and log files
- Polypropylene cover
- Built-in Battery Backup
- Galvanized steel frame
- Opens gate 90° in approximately 12 sec.
- Magnetic lock output
- Overlap feature for bi-parting gates

1. I = Residential; II = Commercial; III = Limited Access; IV = Restricted Access
2. Plug-in loop detector ports; open, center and reverse. DoorKing model 9412, 9413 plug-in loop detectors only.
3. DoorKing model 8045 receivers only.
4. Continuous operation is when AC power is present. Operation on battery backup (7.5 Ah batteries) is limited to approximately 40 cycles, up to 150 cycles with optional 18 Ah batteries. Cycles stated are just an estimate. Actual number of cycles will vary depending on usage, accessories connected, gate weight, operating condition of gate, temperature and charge state of the batteries.

2160 DC Swing Gate Operators (Coming Soon – not yet available)

Brushless DC Gate Operator

Step 1: Choose an Operator

2160-380 1/2 HP 115/230 VAC

2160-381 1 HP 115/230 VAC

Operators include two 7.5 Ah batteries for limited backup operation.

Entrapment Protection - Required

Use Type B1 (non-contact) and/or Type B2 (contact) entrapment protection devices to protect all areas where the risk of entrapment exist - see pages 50 - 51.

Operator will not run without entrapment protection device(s) connected to the controller board. See installation manual for more information.

Battery / Solar Options

1801-004 12-Volt, 18 Ah Battery¹

1. Two required for 24 Volt operation.

Loops and Loop Detectors - Optional

2100-221 Single Channel Plug-in Detector

2100-222 Dual Channel Plug-in Detector

See page 52 for a complete list of all loop detectors, prefabricated loops and loop accessories available.

1. I = Residential; II = Commercial; III = Limited Access; IV = Restricted Access
2. Plug-in loop detector ports; open and reverse. DoorKing plug-in loop detectors only.
3. Continuous operation is when AC power is present. Operation on battery backup (7.5 Ah batteries) is limited to approximately 40 cycles.
4. Up to 150 cycles with 18 Ah batteries. Actual number of cycles will vary depending on usage, accessories connected, gate weight, operating condition of gate, temperature and charge state of the batteries. Charge state of batteries is affected by geographical location of the product when using solar to recharge the batteries.
5. Solar powered operators will not support bi-parting (dual) gate operation.

6524 DC Swing Gate Operators

Adjustable Limit Swing Gate Operator

Step 1: Choose an Operator

6524-380 115/230 VAC

Includes two 7.5 Ah batteries for limited backup operation.

Includes 50 feet (15 m) of RS 485 interconnection cable for bi-parting (dual) gate operation.

6524-381 24 VDC (Solar)

24 VDC solar input power only (supply your own batteries and solar charging system or use DKS solar kit).

Solar powered operators will not support bi-parting (dual) gate operation.

Entrapment Protection - Required

Use Type B1 (non-contact) and/or Type B2 (contact) entrapment protection devices to protect all areas where the risk of entrapment exist - see pages 50 - 51.

Operator will not run without entrapment protection device(s) connected to the controller board. See installation manual for more information.

End Catch

1204-004
 Designed for gates with 2-inch (50.8 mm) frame.

9150 Slide Gate Operators

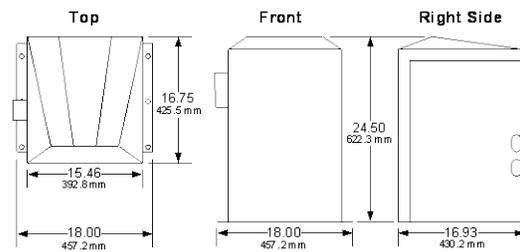

Automatic Magnetic Limits

9150

- Self-Adjusting Magnetic Limits
- Built-in clutch
- Plug-in Loop Detector Ports
- Built-in power and reset switches
- Two 115 VAC convenience outlets
- Fail-Safe Configuration
- G90 Galvanized steel frame
- Steel or Polypropylene (Poly) cover
- 20-Foot (6 m) #40 Nickel Plated Chain
- Gate tracker data output
- Selectable stop/ reverse function
- Partial open / anti-tailgate feature

High Voltage Kit - Optional

2600-266 High Voltage Kit

Allows the operator to be powered from 208, 230, 460 or 575 VAC source voltage.

Entrapment Protection - Required

Use Type B1 (non-contact) and/or Type B2 (contact) entrapment protection devices to protect all areas where the risk of entrapment exist - see pages 50 - 51.

Operator will not run without entrapment protection devices connected to the controller board. Minimum of two (one in each direction of travel) is required. See installation manual for more information.

Loops and Loop Detectors - Optional

See page 52 for a complete list of all loop detectors, prefabricated loops and loop accessories available.
